BALLEW'S MOBILE HOME ROOF-OVER SYSTEM

Ballew's roof-over system guards against the effects of water and wind damage, costly repairs bills, outside noise and high energy costs. This system triple seals the roof with three protective layers: two full inches of foam insulation, vent guard tape, and aluminum pans with a baked-on enamel finish.

No screws go into the top of the existing roof. The perimeter angle will be the only screws penetrating the home and these will be along the sides into the fascia board.

The typical mobile home roof provides an R-Value of 12.39. TWO FULL INCHES OF DOUBLE-BACKED STYROFOAM INSULATION CAN INCREASE THE R-VALUE TO 24.43.
